

HISAW

HAWAII INVASIVE SPECIES AWARENESS WEEK

Welcome an investigatory, hands-on, STEM lesson into your classroom!

Host a BIISC presenter for a 50-minute, standards-based activity on invasive insects during HISAW

February 22-26, 2016

Surveying is a key skill in protecting our ecosystems and agriculture. Learn how and why we need to survey for insects on our island.

Topics and activities include:

- Making a homemade insect trap
- Using an identification key (*dichotomous key*)
- Observing a variety of locally collected, preserved insect specimens
- The threat of Coconut Rhino Beetle

Best for grades 4-10. Contact us about options for other grade levels. Students can build their own bug traps in class with simple materials. Shorter or longer time periods also possible. Call or email to see what we can do for you and your students!
